

# Parallel Programming using GPUs

## Introduction

Felice Pantaleo

CERN - Experimental Physics Department

[felice@cern.ch](mailto:felice@cern.ch)

# Purpose of this course

- Learn how to move data between the CPU and the GPU memory spaces?
- Learn how to program GPU to spawn thousands of threads that work concurrently to achieve a result?
- Learn how to speed up your code?
- Understand the relationship between a domain problem and the computational models available:  
think parallel
